

AMENDMENTS TO THE CLAIMS:

Please cancel Claim 8 without prejudice to or disclaimer of the subject matter recited therein.

Please amend Claims 1, 4, 9 and 10 as follows:

1. (Currently Amended) An information processing apparatus for submitting document information including a plurality of images via a network, comprising:

an image ~~input~~ pickup unit;

a schedule ~~storage~~ setting unit adapted to ~~store input set, in advance, an image pickup position and a image pickup time of said image pickup unit as~~ schedule information ~~of said image input unit~~ and store the schedule information in a memory;

an image storage unit adapted to store an image which is obtained by said image pickup unit in accordance with the schedule information stored in the memory;

a designation unit for designating an image among the plurality of images in the document information, to be ~~changed by~~ replaced with an image newly stored in said image storage unit; and

a document creation unit adapted to create new document information by substituting the designated image in the document information by the image stored in said image storage unit.

2. (Previously Presented) The apparatus according to claim 1, further comprising means for transferring the document information created by said document creation unit to a network server.

3. (Cancelled)

4. (Currently Amended) The apparatus according to claim 1, further comprising display control means for displaying the ~~changed image~~ the image newly stored in said image storage unit in a different pattern.

5. (Previously Presented) The apparatus according to claim 1, further comprising display control means for, when the image among the plurality of images in the document information is designated, displaying that image in a pattern different from other images.

6. (Previously Presented) The apparatus according to claim 1, further comprising means for storing an image prepared in advance, and substituting an image among the plurality of images in the document information, which is not changed, by the image prepared in advance.

7. (Original) The apparatus according to claim 1, wherein the document information is HTML document information.

8. (Cancelled)

9. (Currently Amended) A method of controlling an information processing apparatus for submitting document information including a plurality of images via a network, comprising:

the step of storing input setting, in advance, an image pickup position and an image pickup time of an image pickup unit as schedule information and storing the schedule information in a memory of predetermined image input means;

the step of storing an image which is obtained by the image pickup unit in accordance with the schedule information stored in the memory;

the step of designating an image among the plurality of images in the document information, to be ~~changed by~~ replaced with an image newly stored in said image storage step; and

the step of creating new document information by substituting the designated image in the document information by the image stored in said image storage step.

10. (Currently Amended) A storage medium that stores a computer program code for an information processing apparatus which comprises image input means and submits document information including a plurality of images via a network, the code comprising:

a program code of the step of storing input setting, in advance, an image pickup position and an image pickup time of an image pickup unit as schedule information and storing the schedule information in a memory of predetermined image input means;

a program code of the step of storing an image which is obtained by said image pickup unit in accordance with the schedule information stored in the memory;

a program code of the step of designating an image among the plurality of images in the document information, to be ~~changed by~~ replaced with an image newly stored in said image storage step; and

a program code of the step of creating new document information by substituting the designated image in the document information by the image stored in said image storage step.

11 - 68. (Cancelled)

69. (Previously Presented) The apparatus according to claim 1, wherein, before the designation, images of the plurality of images are displayed to a user, and

wherein, after the designation, a display to the user is made that comprises (a) the images that were displayed to the user before the designation, other than the designated image, and (b) the image stored in said image storage unit that, in the substitution, replaces the designated image.
